Abstract

Your abstract.

1 Introduction

1.1 Cosmic strings

1.2 Machine learning

2 Method

2.1 Data

2.2 Neural network structure

3 Results

3.1 Accuracy

3.2 Efficiency

4 Discussion

5 Conclusion

References

The first detected gravitational wave (GW) signal was GW150914[1] in 2015. Since then many technological advancements have been made, yet one thing that still plagues detectors is the presence of glitches. These are bursts of non-Gaussian noise that look like a signal .
